TURNING IDEAS INTO REALITY

NESTING

Eliminating waste with the capabilities of nesting allows you to have a lower cost of part and greater material yield.

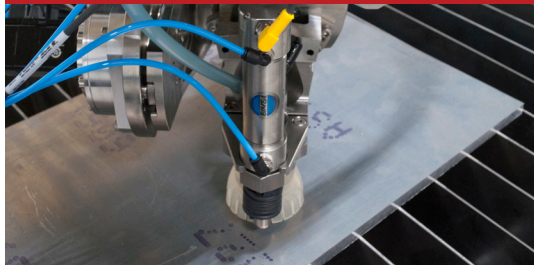

ACCURACY

A linear straightness accuracy of +/- 0.0015" provides you with a level of precision cutting well beyond your average waterjet machine.

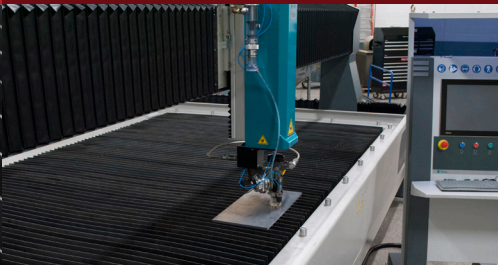

SIZE

Larger sheets of material gives you more parts per run, cutting down on costs and production times. Our machine envelope is 81"x158" (6'x13').

MATERIALS

Using pure water or garnet abrasive allows us to cut virtually any soft or hard material from steel, wood, aluminum, rubber and more.

FINISHING

The technology in this machine can cut material with a burr-free edge so little to no finishing is required.

BALANCE

Our waterjet automatically balances itself compensating for stream lag and taper preventing any distortion or angular cutting in your parts.
