

MAGNETIC HOLDERS

High Strength Magnetic Inserts

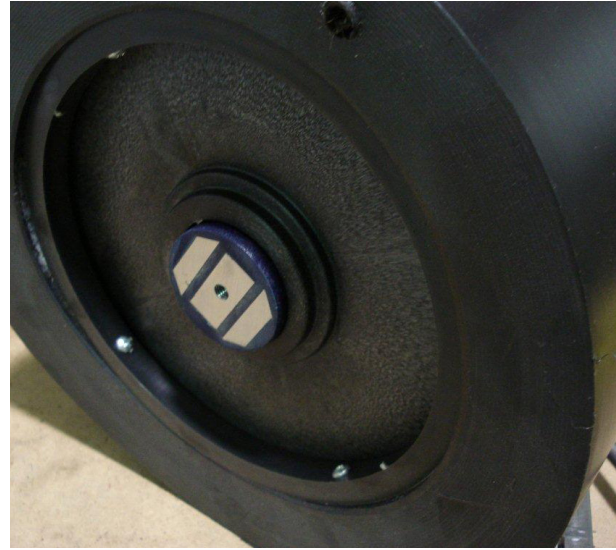

What It Is

These are high strength magnetic inserts that firmly hold the hole former to the form core.

This design eliminates the need to use wire to tie hole formers to the cage or to screw or bolt the hole former to the form. It also allows easy positioning and removal and takes away the risk of moving or floating hole formers.

Why It's Better

- Interchangeable
- Faster and easier than wiring
- Can be reused over and over
- 300 pounds of force

Versatile

The Round Magnet can be used with both the black Pro-Former polyethylene hole formers as well as the Magna-Former white fiberglass hole formers.

Cam-Magnet

The Cam-Magnet is designed only for the black Pro-Former polyethylene hole former. Also with this design there is no need for a magnet plate.

INFORMATION

With the black polyethylene an interchangeable magnet plate must be used inside the hole former in order to hold it in place.
